SUMMARY

Full Stack Developer focused on building scalable web applications, backend infrastructure, and real-time systems. Skilled in REST APIs, authentication, WebSockets, caching, and AI integration with strong foundation in Data Structures & Algorithms. Effective communicator and problem-solver with hands-on experience across production deployments and hackathons.

WORK EXPERIENCE

- Full Stack Engineer Intern** | **ACT Business Solutions** | **Remote** Apr 2026 – Present
- Architected and developed enterprise modules including **Risk Management, Procurement, Invoicing, and HRMS** from database schema design to React/TypeScript integration — reducing cross-team integration effort by **~40%** via reusable REST APIs and UI components.
 - Designed modular backend services to decouple Payroll, HRMS, and Performance systems, enabling **independent feature deployments** and cutting inter-module dependency resolution time by **~35%**.
 - Integrated third-party **payment gateways and notification systems**, supporting **1,000+ transaction events** through secure and reliable inter-service communication workflows.
 - Implemented **Redis caching** on high-traffic reporting endpoints — reduced average API response time by **~60%** and redundant DB reads by **~70%** under concurrent load.
 - Built advanced **filtering, sorting, and pagination** across dashboards, maintaining **sub-200ms query times** on datasets exceeding **100K+ records**.
- Technical Coordinator** | **ABES E-Cell** Jun 2025 – Dec 2025
- Developed dynamic event and announcement sections, reducing content deployment turnaround from **2–3 days to under 1 hour** for non-technical members.
 - Provided real-time technical support across **5+ events and hackathons**, maintaining **99%+ platform uptime** and resolving issues within **<15 minutes** under strict deadlines.

PROJECTS

- RepoMind – AI Repository Intelligence Platform** | *Next.js, FastAPI, LangGraph, Neo4j, Qdrant, PostgreSQL*
- Built an AI-powered repository intelligence platform indexing **100,000+ lines of code** into a hybrid **GraphRAG + Vector RAG** pipeline using AST parsing, enabling **sub-2s** architecture-aware retrieval across files, APIs, and dependencies.
 - Implemented **LangGraph multi-agent workflows** for repository Q&A, impact analysis, documentation generation, dependency tracing, and code explanation with **Neo4j knowledge graphs, Qdrant, and LLM-powered** hybrid retrieval. [GitHub](#)
- CollabAI** | *React.js, Node.js, Socket.io, Yjs, Gemini API* [GitHub](#)
- Built a real-time collaborative workspace supporting **50+ concurrent users** with **CRDT-based synchronisation** using Yjs and Socket.io, ensuring conflict-free document editing.
 - Integrated **Gemini API** for AI-powered summarisation and content generation, with JWT authentication and rate limiting to secure **100+ active workspaces** and collaborative sessions.
- Distributed Job Queue System** | *Node.js, PostgreSQL, Redis, Docker* [GitHub](#)
- Built a distributed **producer-consumer architecture** capable of processing **50,000+ background jobs** with concurrent workers, scheduled execution, retries, and automatic failure recovery.
 - Developed **monitoring APIs** for tracking **1,000+ queued tasks** and worker health in real time, achieving **99%+ job execution reliability** through fault-tolerant processing.
- Interview Prep Platform** | *React.js, Node.js, MongoDB, Gemini API* [Live](#) | [GitHub](#)
- Built a **role-based platform** for students and teachers with **AI-generated personalised learning roadmaps** using Gemini API for dynamic preparation strategies.
 - Designed secure APIs with optimised frontend workflows to efficiently support multiple user roles and personalised learning experiences.

TECHNICAL SKILLS

Languages: JavaScript, Python, TypeScript, Java, C++
Frontend: React.js, HTML5, CSS3, Tailwind CSS
Backend: Node.js, Express.js, REST APIs, JWT Authentication, WebSockets, BullMQ
Databases: MongoDB, PostgreSQL, MySQL, Redis
System Design: Caching, Distributed Systems, Rate Limiting, Fault Tolerance, SDLC
AI/LLM: LLMs, RAG, Prompt Engineering, AI Integration, LangChain, LangGraph, AI Agents, Vector Databases, MCP
Core CS: OOP, DBMS, Operating Systems, Computer Networks, Data Structures & Algorithms
Tools: Docker, Git, GitHub Actions, Postman, GitHub Copilot, ChatGPT, Claude, Render, Vercel
Real-Time Systems: Socket.io, Yjs (CRDT)
Soft Skills: Problem Solving, Strong Communication, Team Collaboration, Critical Thinking

ACHIEVEMENTS

2nd Place — Maharaja Agrasen College Hackathon, University of Delhi
4th Place — IIT Guwahati Hackathon 2026
Finalist — TechSprint Hackathon, DevSangam'26
Finalist — AI Summit Hackathon, IIT Ropar

EDUCATION

ABES Engineering College, Ghaziabad
B.Tech Computer Science Engineering

Ghaziabad, UP
CGPA: 8.27/10
